Experience

GoVocal.AI

SOFTWARE DEVELOPER INTERN

Gurugram, Haryana
May 2019 - Present

A platform to build voice apps instantly without any coding.

- Developed software lifecycle products from vision through successful deployment.
- Successfully delivered Voice App for Tata Sky on Actions on Google (Google Assistant) and Amazon Alexa (Alexa Skill) into Production.
- Successfully upgraded an android app, Quiddity using React Native. It is a book summaries app where you can read and listen to the summaries of the Great and Best Selling books for free.
- Reviewed, monitored, and repaired any changed code for quality, adherence to standards, and potential performance effects on compatible systems.
- Managed software documentation by testing and validating the accuracy of all new applications to ensure user-friendliness and productivity.
- Worked with Amazon AWS Lambda and Cloud-watch for the deployment and testing of the Voice Apps in Production.
- Wrote the request logger for Systematically logging the request and debugging the errors using Winston.
- Designed new software applications by using object-oriented languages like JavaScript.

- Altered, updated, and enhanced existing systems and applications after performing troubleshooting measures to determine the issue.
- Worked on the development of GoVocal.AI platform.
- Added chatbot feature in GoVocal.AI, where people can easily create a chatbot for their website without writing any code.
